

[Context or Role]: Briefly describe who you are or the perspective you want the AI to take.

[Objective]: Clearly state what you want to achieve or learn.

[Scope or Constraints]: Define any boundaries (e.g., jurisdiction, time period, format).

[Tone or Style]: Optional—specify if you want the response to be formal, conversational, bullet-pointed, etc.

[Example or Reference]: Optional—include a sample case, statute, or previous output to guide the AI.

Example prompt:

In your prompt, answer these questions for the AI in order to give it the proper context for the task you have in mind.

[Who am I?]

[What is my goal]

[What resources am I giving it to accomplish my goal?]

[What does a correct response look like?]

[What don't I want?]

[How should the style look?]

[Ask the AI to help me make it better]

[Give it a step to check for hallucinations]

[How should it report errors?]

[Test Instructions]

Example

[Who am I?]

I am a law student taking contracts in our second semester of 1L year.

[What is my goal]

I would like to create a study aid to help me prepare for my contracts final exam. I'd like it to be in the form of an HTML flashcards that I can use to study.

[What resources am I giving it to accomplish my goal?]

Attached you'll see an outline which the professor provided that has my notes and a lot of his info on it.

[What does a correct response look like?]

I was thinking that I'd like you to create an html file in the form of flashcards that I can use to study for this material. It would look like a web page with a flash card and a concept facing the user. When the user clicks the flash card it flips to the other side. There is also a next button that cycles to the next card. So for example, a card might say "What are the elements of the statute of frauds?" and on the back it would list out the answer.

I want this to be contained in **one file** that can be run on my laptop.

[What don't I want?]

If you see information in my attached file that is incomplete or just my miscellaneous notes, do not include them if they don't fit the purpose.

[How should the style look?]

I'd like the theme of the page to be library themed. Use that to inspire the style.

[Ask the AI to help me make it better]

After you create the file, let me know what other things you'd suggest I add in order to make it a better study aid.

[Give it a step to check for hallucinations]

As a second step to this task, once you are done making this flashcard game, I want you to check the flashcards for accuracy.

[How should it report errors?]

If you find errors, I want you to mention it in a list in your text response

[Test Instructions]

For now, lets limit this study aid iteration just to ten of the best flashcards you can make. then we'll add more once it looks ok.
